Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to comethods for assessing the expression level of these genes. The method comethods for assessing the predisposition of mammals and preferably humans comestive heart disease or for an acute state of such a disease. It is also considered to treat diseases of the heart such as congestive heart failure, compathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart muscle disease, systemic arterial compating the sequence of the invention pulmonary heart disease, valvular conducations, pulmonary heart disease, valvular conducations. Sequences of the invention are also used in gene therapy. Conducations of the invention are also used in gene therapy. The present sequence is a cDNA from 66214 clone. This construction constrains the treatments of constraint constraints for the treatments of constraints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

CC tissues and their corresponding proteins. The invention also relates to ce methods for assessing the expression level of these genes. The method CC is used for testing the expression level of these genes. The method CC is used for testing the predisposition of mammals and preferably humans CC or a heart disease or for an acute state of such a disease. It is also conseil to treat diseases of the heart such as congestive heart failure, CC dilative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiocy myopathy, specific heart muscle disease, rhythm and conduction disorders, CC myopathy, specific heart, coronary heart disease, systemic arterial CC hypertension, pulmonary hypertrension, pulmonary heart disease, valvular CC heart disease, congenital heart disease, pericardial disease and CC heart disease, congenital heart disease, pericardial disease and CC are useful for the development for medicaments for the treatments of the invention are also used in gene therapy. CC are useful for the development for medicaments for the treatments of the art diseases. The present DNA sequence is expressed sequence tag CC (EST) 66214 clone.

The present sequence is the cDNA encoding the human chisel gene (Cs1) that is mapped to the human chromosome Xq21.3-q22. It comprises 5 exons. It is a member of the EF-Hand protein super family and is involved in signalling pathways. It is predominantly expressed in heart and skeletal functions in regulation aspects of differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle cell development and functional detrophies, skeletal myopathies such as Duchenne muscular and myotonic dystrophies, skeletal myopathies such as Duchenne muscular dystrophy, heart failure, cardiac hypertrophy,

     The invention relates to a method of diagnosing (I) the onset or progression of benign prostatic hyperplasia (BPH), or screening (II) fo or identifying an agent that modulates the onset or progression of BPH. The method is based on changes in gene expression in BPH tissue isolate from patients exhibiting different clinical states of prostate typerplasia as compared to normal prostate tissue. (I) comprises detecting the expression levels of one or more genes in prostate cells from the subject that are differentially regulated compared to normal prostate cells. (II) comprises preparing a first gene expression profil of BPH cells or BPH-like cell population, exposing the cells to the agent expression profile of the agent exposed cells, and comparing the first and second gene expression profiles.
                                                                                                                                                                                                                                                                                                                                       Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                         Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells from parient that are differentially regulated compared to normal prostate

The methods are useful to present information identifying the expression level in a tissue or cells, by comparing the expression level of genes given in the specification in the tissue or cells to the level of expression of gene in the database, and displaying the expression levels of at least one gene in the tissue or cell sample compared to the expression level in BPH. Agents using (II) are useful for treating BPH or prostate cancer. ABK64106-ABK64860 represent human benign prostatic hyperplasia gene sequences of the invention.

                                                                                                                                                                                                                                                     The present invention describes a method (M1) for screening for an careful continuous call agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in careful to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 84/7 sequences (Given in ABL/616), or is at least 95% identical to (S), where a change in careful ty and can be used in gene therapy. M1 can be used for screening a product which can anti-neoplastic agent, and can be used for producing a product which can the data collected with respect to the anti-neoplastic agent as a cresult of M1, and the data is sufficient to convey the chemical curvature and/or properties of the agent. M1 can be used in the concer such as colon, breast, stomach, lung, thyroid, cosophageal, ovarian, kidney, prostate or pancreatic cancer, infiltrating ductal cancer, cuamous cell carcinoma, neuroendocrine cc carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                      Matches

                                                                                                                                                 The present sequence is the cDNA encoding the murine chisel gene (Cs1) CC that is mapped to the mouse X chromosome. It is a member of the EF-Hand CC protein super family and is involved in signalling pathways. It is CF protein super family and is involved in signalling pathways. It is CF protein super family and is involved in signalling pathways. It is CF protein super family expressed in heart and skeletal muscles and is activated CC after the differentiation of cells. CSl functions in regulation aspects CC differentiation or adaptive processes that maintain muscle CC homeostasis. This sequence can be used in the detection, diagnosis, CC prophylactic and therapeutic treatment of diseases such as those CC is also used in the treatment of muscular and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, CC myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, CC myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, CC myotonic dystrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.

                                                                                                                                        The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                               Sequence

The present invention describes oligonucleotide libraries for detecting CC messenger RNAs that populate a (sub-)transcriptome, where the CC (sub-)transcriptome comprises messenger RNAs transcribed from multiple CC transcripton units that populate a genome. The library comprises CC several oligonucleotides, each capable of hybridising selectively to a SC est of messenger RNAs transcribed from a given transcription unit of CC the genome, which encodes one or more messenger RNAs splice variants. CC The oligonucleotide libraries are useful for detecting mRNAs from a CC biological sample, in expression profiling studies, in qualitatively or CC quantitatively characterising the corresponding transcriptome, and in CC transcriptomes. The libraries may also be used as specialised mini CC transcriptomes. The libraries may also be used as specialised mini CC particular biological or pathology specific genes such as those genes CC only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes such as those genes CC condition; to detect developmental specific genes; and to detect RNA CC transcripts and splice variants of a transcriptome of a patient suffering CC from a particular disorder. ABN27253 to ABN59589 represent CC the exemplification of the present invention

                                                                                                                                                   CC acids comprising at least 18 base pairs of the chemically pretreated DNA CC of genes associated with DNA repair selected from PMS2L1, PMS2L12, CC PMS2L2, PMS2L13, PMS2L 14, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1 TDG, INPPL1, CC PMS2L2, PMS2L13, PMS2L 14, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1 TDG, INPPL1, CC Cockayne specifically attaxia telangiectasia, edging, Bloom's syndrome, CC cockayne syndrome, Nilmegen breakage syndrome or Werner syndrome, CC cockayne syndrome, trichthiodystrophy, Fanconi's anaemia, solid tumours CC and cancer, particularly by determining status of cytosine methylation of CC and/or by detecting single-nucleotide polymorphisms. Determination of CC individual methylation patterns may allow development of individualised therapies. The sequences given in records ABL92192-ABL92135 represent CC repair, and their complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to nucleic acids containing a sequence of at least 18 nucleotides of chemically treated DNA of genes associated with DNA repair, and their complements. The invention also relates to nucleic acids comprising at least 18 base pairs of the chemically pretreated DNA of genes associated with DNA repair selected from PMS2L1, PMS2L12,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-APR-2000; 2000DE-1019058.

The invention relates to nucleic acid sequences comprising at least 18 cc bases of a chemically pretreated gene associated with gene regulation, associated with DNA replication, CERNED DNAZL, ATR, CHDIL, ERCC3, SNRPAL, CR AD50 and LIG2. The chemical pretreatment converts cytosine bases cummethylated at the 5-position to uracil or another base with cytosine bases. The printed state of the sequences and method are useful in the cytosine methylations. The DNA sequences and method are useful in the cytosine methylations. The DNA sequences and method are useful in the cytosine methylation patterns of such genes. They are especially useful crytosine methylation patterns of such genes. They are especially useful syndrome, solid tumours and cancer.

CC specification and was supposed to be available directly from WIPO at fig. wipo.int/pub/published.pct sequences. However, the sequence data did not correspond to that referred to in the specification. The present data contex that correspond to that referred to in the specification. The present data contex the sequence data for the patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 10

             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular plaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a gene (I) derived from Buchnera sp. CC containing the DNA (a) or (b), (a) has a fully defined base pair CC sequence selected from a table of sequences found in the Buchnera sp. CC genomic DNA of ABA92787 given in the specification or is a DNA selected CC genomic DNA of ABA92787 given in the specification or is a DNA selected CC the DNA (a) and encodes a protein. Also described are: (1) a recombinant CC the DNA (a) and encodes a protein. Also described are: (1) a recombinant CC genomic DNA of Buchnera sp. containing the sequence given in CC (3) a genomic DNA of Buchnera sp. containing the sequence given in CC (d), (c) is a DNA containing a fully defined sequence given in ABA92788 CC (d), (c) is a DNA containing a fully defined sequence given in ABA92788 CC (d), (c) is a DNA containing a fully defined sequence given in ABA92788 CC (d), (c) is a plasmid which hybridises with a DNA; and (5) a CC method for the preparation of a protein in which (III) is cultured and CC the expression protein of the objective protein is collected from the CC chemicals for exterminating cockroaches. The present sequence represents CC the specifically claimed Buchnera sp. genomic DNA sequence, from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Borrelia burgdorferi polynucleotide sequence
                                                                                                                                                                                                       AAX20248 to AAX20402 represent polynuclectide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. to a family of motile, spiral-shaped bacteria causes epidemic and spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                              New isolated Borrelia burgdorferi nucleic acids - used to products for the detection, diagnosis, characterisation, and therapy of infections, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-JUN-1998;

                                           Human prostate expression marker cDNA 34897.
                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryces for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                   in a patient;

(e) selecting a composition for inhibiting prostate cancer in a patient;

(f) assessing the prostate cell carcinogenic potential of a compound;

(g) determining whether prostate cancer has metastasized in a patient;

(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                            cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 7298; 11750pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -
